Career Objective

I am passionate about deploying deep learning models in demanding real-world scenarios, distinct from conventional training environments. My specific interest lies in formulating effective strategies to adapt models when encountering challenges like variations in data distribution during testing, handling unlabeled data, or addressing the introduction of new tasks. Accordingly, my research focuses on Unsupervised Domain Adaptation, Test-Time Adaptation, and Open-set tasks.

Education

Seoul National University — Seoul, South Korea
Combined M.S./Ph.D. of Intelligence and Information — *Sep 2019-Present*
- Advisor: Prof. Nojun Kwak
- Visiting Scholar at Carnegie Mellon University — *Jan 2020-Jun 2020*

Pohang University of Science and Technology — Pohang, South Korea
Bachelor of Industrial Management Engineering (Industrial Engineering) — *Mar 2011-Aug 2016*

Work Experience

Naver CLOVA, Research Intern — *Dec 2022-May 2023*
- Developing a face detection model for a camera app and refactoring the code
- Conducting research on open-vocabulary object detection using the CLIP model
- Conducting research on test-time adaptation for object detection

Recobell, Data Scientist — *Sep 2016-Aug 2019*
- Analyzing e-commerce user behaviors and developing machine learning based recommendation algorithm
- Developing machine learning based anomaly detection algorithms for detecting abnormal users
- Optimizing advertisement exposure based on machine learning algorithms

Projects

AI-based 1:1 Compound Conversation Technology through Situation Awareness and User Understanding, KETI *Aug 2023– Nov 2023*

- Developing an image retrieval model for finding the most relevant images using both text and image queries

Development of an object detection model for real-world environments, SNUAI *Jan 2021–Nov 2021*

- Conducting research on unsupervised domain adaptation for object detection

Real-Time Prediction of Intradialytic Hypotension, Seoul National University Hospital *Jan 2020-Dec 2020*

- Developing a prediction model for tabular time series data

Patent

Cross Domain Object Detector using Offsets to Bounding Box, Korea Patent App, 10-2022-0035183
Jayeon Yoo, Inseop Chung, Nojun Kwak

Teaching Experience

Uncertainty Estimation and Anomaly Detection, Samsung Electronics, Teaching Assistants (6 hours) *Sep 2023*

Deep Learning for Object Detection, Samsung Electronics, Teaching Assistants (9 hours) *Jan 2022*

Invited Talk

Domain Adaptive Object Detection, RTM, Seoul *Nov 2022*

Skills

Languages: Korean (Native), English (Advanced)
Technical Skills: Python (Pytorch, Tensorflow, Numpy), C++, SQL, R, Arena
